Investment approach

The Fund's investment objective is to seek capital appreciation. The Fund seeks this objective by allocating its assets among a variety of discretionary sub-advisers with experience managing non-traditional or "alternative" investment strategies. Blackstone is responsible for selecting the strategies, for identifying and retaining sub-advisers, and for determining the amount of Fund assets to allocate to each strategy and to each sub-adviser. Blackstone may also manage a portion of the Fund's assets directly.

- Fund performance is shown net of all fees and expenses. Past performance may not be a reliable guide to future performance. The value of Fund shares may go down as well as up and there can be no assurance that the Fund will achieve its investment objectives or avoid significant losses. Performance is estimated and unaudited for 2016. Net performance for the Fund as well as indices is from 10/15/15 to 5/31/16 and is annualized.
- The indices presented are indicative and for illustrative purposes only. The volatility of the indices presented may be materially different from that of the performance of the Fund. In addition, these indices employ different investment guidelines and criteria than the Fund; as a result, the holdings in the Fund may differ significantly from the securities that comprise the indices. The performance of these indices has not been selected to represent an appropriate benchmark to compare to the performance of the Fund, but rather is disclosed to allow for comparison of Fund performance to that of well-known and widely recognized indices. A summary of the investment guidelines for these indices is available upon request. In the case of equity indices, performance of the
- Performance is presented through May 31, 2016. Net performance is net of all fees and expenses. Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance data quoted. Additional information and current performance data is available at www.blackstone.com/bxdms. BXDMSIN launched on October 15, 2015 and thus performance for October 2015 is limited to October 15 through October 31.
- The portfolio allocations in the table reflect allocations as of the date of the report. The Fund may shift allocations among sub-advisers, strategies and sub-strategies at any time. Further, Blackstone, on behalf of the Fund, may determine to not employ one or more of the above-referenced sub-advisers, strategies or sub-strategies. Blackstone may also add new sub-advisers, strategies or sub-strategies. Accordingly, the allocations are presented for illustrative purposes only and should not be viewed as predictive of the ongoing composition of the Fund's portfolio (and its sub-advisers), which may change at any time.
- The above terms are summarised and qualified in their entirety by the more detailed information set forth in the UCITS prospectus and supplement.
- The Fund will pay to Blackstone a performance fee equal to 15% of any returns the relevant class achieves above any losses carried forward from previous periods. The Fund may also pay to Blackstone an additional performance fee equal to the amount of any performance fees owed by Blackstone to the sub-advisers. Any such additional performance fee will be deducted from Blackstone's performance fee before it is paid in subsequent quarterly performance periods. The performance fee together with any additional performance fee are subject to a cap of 4.95% of the NAV of the class.
- Blackstone has agreed to reimburse the Fund so that certain of the Fund's "Other Expenses" will not exceed 0.45% annually. Please see important disclosure information at the end of this document for further explanation.
- Blackstone Senfina Advisors L.L.C. "Senfina" is an indirect wholly-owned subsidiary of The Blackstone Group L.P., a publicly traded master limited partnership that has units that trade on the New York Stock Exchange under the symbol "BX." Senfina is an affiliate of BAIA, the Fund's investment adviser, on the basis that it is under common control with BAIA. The investment by BXDMS with Senfina benefits Blackstone and a withdrawal from Senfina would be detrimental to Blackstone.
- Sub-adviser is not currently managing any Fund assets. Allocations may change at any time without notice.

In the case of interest rate products, exposure data is represented by the 10-year equivalent instrument. Positions of unknown type (if any) are excluded from exposure data. Data is obtained from State Street Fund Services (Ireland) Limited, the administrator for the Fund. The Fund does not guarantee the accuracy of such data. Using the higher Standard & Poor's ("S&P's") and/or Moody's Investor Service ("Moody's") ratings.
- (2) Dv01 represents the change in value of a security for a 1 basis point change in interest rates as a percentage of fund NAV.
- (3) Value at Risk ("VaR") is calculated at a 99% confidence level for a one month holding period (20 business days) using a model based on historical Fund data. Please see the Glossary of Terms for a further explanation of VaR.

*Comprised of index futures, options on index futures, ETFs, and ETF options

May Market Commentary

In equities, the month of May saw divergence in performance across developed markets, which generally moved higher, and emerging markets (“EM”), where stocks came under pressure. The slowing growth in Chinese and Brazilian economies coupled with mixed commodity performance weighed on EM sentiment, while relatively hawkish comments from various members of the U.S. Federal Reserve (“Fed”) fueled dollar strength and positive equity performance in developed markets.

In fixed income, the rally in oil prices contributed to strong performance in U.S. high yield markets. European high yield also performed well, as improving economic conditions and monetary stimulus helped buoy investor sentiment. U.S. treasuries posted modest losses in May as the market priced in an increased probability of the Fed raising interest rates; an event which we now know is less likely given the uninspiring June payroll data. Finally, commodity markets showed divergence in May, with oil generating gains as metal prices declined.

Review of Fund Performance

The investment objective of Blackstone Diversified Multi-Strategy Fund (the “Fund”) is to seek capital appreciation. The Fund aims to achieve its objective by allocating assets among a variety of investment sub-advisers with experience managing non-traditional or “alternative” investment strategies. In May, the Fund’s Class I (USD) shares returned 0.89%¹ net of fees and expenses versus 0.65% and -1.34% for the MSCI World and Barclays Global Aggregate Bond Index, respectively². **For a summary of Fund performance of the share class to which this report relates, please refer to the “Investment Summary” section of this report.**

Equity Strategies

Equity strategies were the largest contributor to performance in May, with gains generated from both equity long/short and equity market neutral sub-strategies. Equity strategy contributions were helped by two broader themes. First, alpha capture by the equity sub-advisers was robust for the second consecutive month, a development that mirrored similar success across the industry (Morgan Stanley reports that May was the third best month for stock picking alpha across equity long/short strategies in the past 6.5 years). The second theme that helped boost performance by equity strategies was a reversal in return dispersion across certain sectors in which the Fund has significant exposures. Specifically, the Fund’s exposures to information technology, financials, and health care, which had suffered losses during the first four months of 2016, rebounded strongly in May and provided a significant tailwind during the month.

Positive returns for equity long/short sub-strategies were driven primarily by exposures to health care, technology and financials sectors, which were the beneficiaries of the aforementioned sector rotation. Short exposures to certain health care sub-sectors detracted on the month, along with long retail exposures that retraced gains in response to lower than expected earnings guidance. Within health care, a core holding appreciated materially upon news of an upcoming acquisition, helping drive positive performance. In financials, the market’s expectation of a June rate hike had a beneficial impact as higher rates are viewed to have positive implications for financial services companies. We continue to view the health care and financials sectors as attractive for potential alpha generation, given regulatory dynamics and the opportunity to capitalize on dispersion between winners and losers.

Equity market neutral sub-strategies also benefitted from strong fundamental stock picking alpha, with gains coming from the long side of the portfolio, concentrated in consumer discretionary, materials, and health care sectors primarily. Select information technology, telecommunications, and consumer staples exposures detracted from performance.

-
1. Performance is shown net of all fees and expenses for Share Class I (USD). Past performance may not be a reliable guide to future performance. The value of shares may go down as well as up and there can be no assurance that the Fund will achieve its investment objectives or avoid significant losses. Performance is estimated and unaudited.
 2. The indices presented are indicative and for illustrative purposes only. The volatility of the indices presented may be materially different from that of the performance of the Fund. In addition, these indices employ different investment guidelines and criteria than the Fund; as a result, the holdings in the Fund may differ significantly from the securities that comprise the indices. The performance of these indices has not been selected to represent an appropriate benchmark to compare to the performance of the Fund, but rather is disclosed to allow for comparison of Fund performance to that of wellknown and widely recognized indices. A summary of the investment guidelines for these indices is available upon request. In the case of equity indices, performance of the indices reflects the reinvestment of dividends.

Credit Strategies

Credit strategies contributed positively in May, with gains from both corporate credit and asset-backed sub-strategies. Within corporate credit, idiosyncratic developments drove strong performance across a number of top exposures. Additionally, exposures with ties to potential M&A activity experienced a boost on the month, helping drive returns. Within asset-backed sub-strategies, returns were driven by a combination of income generated from coupons and mark-to-market gains, with the exception of certain GSE credit risk transfer exposures, which experienced mark-to-market losses as spreads widened following a multi-month period of gains. Given corporate credit's stronger retracement off of recent lows relative to structured credit markets, we are relatively more constructive on structured credit in the near to medium term.

Multi-Asset Strategies

Multi-Asset strategies also ended the month in positive territory with macro and systematic sub-strategies providing gains. Despite emerging market debt weakness in May, continued positive developments in Argentina and Greece benefited the Fund's exposures to sovereign high yield bonds in these two regions. Local rates and FX exposures also contributed positively, while fixed income hedges experienced small losses. Systematic sub-strategies experienced gains in value and carry factor models, with asset class attribution distributed across equities and fixed income. Fixed income value and FX momentum exposures detracted from performance.

Changes to the Portfolio

Against the market backdrop described above, we maintain a cautious view of global equity markets, seeing more downside risk than upside potential. Consistent with this view, the net equity exposure of the Fund has been reduced considerably in recent months to below 10%, and allocations to directional equity exposure are likely to see further reductions over the coming months. In the current environment, it is important to be judicious in choosing where to put capital to work. While we seek to maintain a low beta at the Fund level, we are constantly evaluating opportunistic trades with asymmetric risk/reward profiles and low correlation to broader markets.

As a part of our ongoing management of the Fund, we continually evaluate opportunities to provide access to opportunistic exposures that have the potential to enhance the diversification and return profile of the Fund for our investors. In May, we added an allocation within the Adviser managed portion of the Fund to a strategy that seeks to capture various risk premia across asset classes. This strategy was added effective May 17, 2016.

All investors should consider the investment objectives, risks, charges and expenses of Blackstone Diversified Multi-Strategy Fund (BXDMS) carefully before investing. The Key Investor Information Document ('KIID'), Prospectus and Supplement contain this and other information about BXDMS and are available on the Blackstone website at www.blackstone.com/BXDMS. All KIIDs are available in English, and certain share class specific KIIDs are available in French, German, Dutch, Danish, Finnish, Swedish, Norwegian, Spanish and Italian as indicated on the Blackstone website. All investors are urged to carefully read the Prospectus, Supplement and KIID in their entirety before investing.

Glossary of Terms:

Beta: A measure of the volatility, or systemic risk, of a security or a portfolio in comparison to the market as a whole.

Standard Deviation: A measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. Standard deviation is calculated as the square root of variance.

Alpha: A risk-adjusted performance measure that represents the average return on a portfolio over and above that predicted by the capital asset pricing model (CAPM), given the portfolio's beta and the average market return.

Sharpe Ratio: A ratio to measure risk-adjusted performance. The Sharpe Ratio is calculated by subtracting the risk-free rate – such as that of the 10-year U.S. Treasury bond – from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns. The greater a portfolio's Sharpe Ratio, the better its risk-adjusted performance has been.

Delta: The ratio comparing the change in the price of the underlying asset to the corresponding change in the price of a derivative.

Gross Exposure: Reflects the aggregate of long and synthetic short investment positions in relation to the net asset value. For example, if BXDMS has 60% long exposure and 50% synthetic short exposure to a particular asset class, then BXDMS has 110% gross exposure to that asset class. The gross exposure is one indication of the level of leverage in a portfolio.

Net Exposure: This is the difference between long and synthetic short investment positions in relation to the net asset value. For example, if BXDMS has 60% long exposure and 50% synthetic short exposure to a particular asset class, then BXDMS is 10% net exposure to that asset class.

Long: A long position occurs when an individual owns securities.

Synthetic Short: Short selling an underlying security through the use of derivatives. Synthetic Short positions can generate returns when the price of the underlying security declines.

VaR: A statistical technique used to measure and quantify the level of financial risk within a firm or investment portfolio over a specific time frame. Value at risk is used by risk managers in order to measure and control the level of risk which the firm undertakes. The risk manager's job is to ensure that risks are not taken beyond the level at which the firm can absorb the losses of a probable worst outcome.

Glossary of Indices:

Market indices obtained through Bloomberg. Indices are presented are indicative and for illustrative purposes only, are unmanaged and investors cannot invest in an index. The volatility of the indices presented may be materially different from that of the performance of BXDMS. In addition, the indices employ different investment guidelines and criteria than BXDMS; as a result, the holdings in BXDMS may differ significantly from the securities that comprise the indices. The performance of the indices has not been selected to represent an appropriate benchmark to compare to the performance of BXDMS, but rather is disclosed to allow for comparison of BXDMS performance to that of well-known and widely recognized indices. In the case of equity indices, performance of the indices reflects the reinvestment of dividends.

Barclays Global Aggregate Bond Index (NOK-Hedged): provides a broad-based measure of the global investment grade fixed-rate debt markets. It is comprised of the U.S. Aggregate, Pan-European Aggregate, and the Asian-Pacific Aggregate Indexes.

MSCI World Index (NOK-Hedged): A market capitalization weighted index designed to provide a broad measure of equity-market performance throughout the world. The MSCI World is maintained by Morgan Stanley Capital International, and is comprised of stocks from all the developed markets in the world.

Important Disclosure:

Blackstone has agreed to waive its fees and/or reimburse expenses of the Fund so that "Other Expenses" will not exceed 0.45% (annualized). For this purpose, "Other Expenses" includes all expenses incurred in the business of the Fund other than (i) establishment expenses relating to the Fund; (ii) investment management fees; (iii) Performance Fees or Additional Performance Fees; (iv) distributor fees; (v) Eligible Collective Investment Scheme fees and expenses, (vi) brokerage and trading costs, (vii) interest payments, (viii) taxes, and (ix) extraordinary expenses. Blackstone may terminate or modify this arrangement at any time in its sole discretion upon 30 days' notice in writing to the Fund's shareholders.

Important Risks:

There can be no assurance that BXDMS will achieve its investment objective. It should be appreciated that the value of Shares may go down as well as up. An investment in a Fund involves investment risks, including possible loss of the entire amount invested. The capital return and income of BXDMS is based on the capital appreciation and income on the investments it holds, less expenses incurred. Therefore, the Fund's return may be expected to fluctuate in response to changes in such capital appreciation or income. The following is a summary description of certain principal risks of investing in BXDMS:

- General economic and market conditions can affect the price and volatility of investments.
- The success of the Fund depends upon BAIA's skill in determining the Fund's allocation to alternative investment strategies and in selecting the best mix of sub-advisers. There can be no guarantee that sub-advisers will stick to the Investment strategy for which they were selected, or that these strategies will be successful.
- Sub-advisers may make investment decisions which conflict with each other; for example, sub-advisers may hold economically offsetting positions or may purchase or sell the same security at the same time without aggregating their transactions. This may result in unnecessary brokerage and other expenses and the Fund may incur losses as a result.
- Some of the sub-advisers selected may hold only a small number of investments, or assets that move closely in line with assets held by other sub-advisers.
- The Fund's investments will include shares, bonds and FDI. Each of these will be exposed to the risks specific to the type of asset in question. In particular, the use of FDI may result in substantial gains or losses that are greater in magnitude than the original amount invested.
- The Fund may invest in countries with a weak legal or financial framework where it can be hard to enforce ownership rights or repatriate funds.
- The Fund may invest in currencies other than its base currency. The success of measures to protect the Fund or a Class against currency movements cannot be certain.
- Changes in exchange rates may have an adverse effect on the value price or income of the product.
- The Fund may invest in FDI that derive their value from other assets in the expectation of making a profit if the price of the assets falls; theoretically, this could result in an infinite loss.
- The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Low trading volumes, lack of buyers, large positions or legal restrictions may limit or prevent the Fund from selling particular assets quickly and/or at desirable prices.

For further information on the risks faced by the Fund, see "Risk Factors" in the Prospectus and Supplement for the Fund, available from www.blackstone.com/BXDMS
