Investment approach

The Fund's investment objective is to seek capital appreciation. The Fund seeks this objective by allocating its assets among a variety of discretionary sub-advisers with experience managing non-traditional or "alternative" investment strategies. Blackstone is responsible for selecting the strategies, for identifying and retaining sub-advisers, and for determining the amount of Fund assets to allocate to each strategy and to each sub-adviser. Blackstone may also manage a portion of the Fund's assets directly.

(1) Fund performance is shown net of all fees and expenses. Past performance may not be a reliable guide to future performance. The value of Fund shares may go down as well as up and there can be no assurance that the Fund will achieve its investment objectives or avoid significant losses. Performance is estimated and unaudited for 2016 and 2017. Net performance for the Fund as well as indices is from 2/2/15 to 2/28/17 and is annualized.

(2) The indices presented are indicative and for illustrative purposes only. The volatility of the indices presented may be materially different from that of the performance of the Fund. In addition, these indices employ different investment guidelines and criteria than the Fund; as a result, the holdings in the Fund may differ significantly from the securities that comprise the indices. The performance of these indices has not been selected to represent an appropriate benchmark to compare to the performance of the Fund, but rather is disclosed to allow for comparison of Fund performance to that of well-known and widely recognized indices. A summary of the investment guidelines for these indices is available upon request. In the case of equity indices, performance of the indices reflects the reinvestment of dividends. Beta and Alpha represents BXDMSIJ compared to the specific indices. Standard deviation and Sharpe calculations are annualized. All Inception to Date Statistics are calculated using daily performance since Inception.

(3) Performance is presented through 2/28/17. Performance is estimated and unaudited for 2016 and 2017. Net performance is net of all fees and expenses. Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance data quoted. Additional information and current performance data is available at www.blackstone.com/bxdms. BXDMSIJ launched on 2/2/15 and this performance for February 2015 is limited to February 2 through February 28.

(4) The portfolio allocations in the table/chart reflect allocations as of the date of the report. The Fund may shift allocations among sub-advisers, strategies and sub-strategies at any time. Further, Blackstone, on behalf of the Fund, may determine to not employ one or more of the above-referenced sub-advisers, strategies or sub-strategies. Blackstone may also add new sub-advisers, strategies or sub-strategies. Accordingly, the allocations are presented for illustrative purposes only and should not be viewed as predictive of the ongoing composition of the Fund's portfolio (and its sub-advisers), which may change at any time. BXDMSIJ launched February 2, 2015, prior allocations are for the share class with the longest track record, BXDMSKE.

(5) The above terms are summarised and qualified in their entirety by the more detailed information set forth in the UCITS prospectus and supplement.

(6) The Fund will pay to Blackstone a performance fee equal to 15% of any returns the relevant class achieves above any losses carried forward from previous periods. The Fund may also pay to Blackstone an additional performance fee equal to the amount of any performance fees owed by Blackstone to the sub-advisers. Any such additional performance fee will be deducted from Blackstone's performance fee before it is paid in subsequent quarterly performance periods. The performance fee together with any additional performance fee are subject to a cap of 4.95% of the NAV of the class.

(7) Blackstone has agreed to reimburse the Fund so that certain of the Fund's "Other Expenses" will not exceed 0.45% annually. Please see important disclosure information at the end of this document for further explanation.

(8) Sub-adviser is not currently managing any Fund assets. Allocations may change at any time without notice.

(9) BAIA manages a portion of the Fund's assets directly. Such assets include allocations to a risk premia trading strategy and may also include opportunistic trades. BAIA's fees on directly managed assets are not reduced by a payment to a sub-adviser.

February Market Commentary

The strong start to the year continued in February, with a few key themes emerging. First, the probability of a rate hike in March increased substantially, with the market pricing in a near-certain probability of the U.S. Federal Reserve (“Fed”) raising rates at its March meeting, up from a ~25% probability earlier in the month. This increase in expectations was largely driven by hawkish rhetoric from Fed officials and strong economic data across labor market, manufacturing, and inflation measures. Anticipation of a near-term rate hike caused a market reaction that deviated from what we’ve seen in previous cycles. Since the global financial crisis, markets have reacted positively in reaction to indications of loose monetary policy and vice versa with respect to tight monetary policy. Interestingly, in February, markets did just the opposite, shifting into “risk-on” assets and out of “risk-off” assets as expectations of a rate hike increased, indicating that market confidence and the prospect for higher growth are offsetting the growth dampening impacts of tighter monetary policy in the form higher rates.

A second key theme in February was the emergence of a more synchronized global growth story, as survey data, while not unanimously positive, was encouraging during the month. In particular, we saw robust factory data coming out of the U.S., Europe and China. The ISM U.S. manufacturing report came in at 57.7% in February, up from 56.0% a month earlier and marking the sixth straight monthly increase. Similarly in Europe, data showed that euro-zone manufacturing accelerated for a sixth month, and China’s official factory gauge also improved, suggesting that Chinese producers are, at least for now, shrugging off the negative implications of potential trade tariffs. A more synchronized global growth trajectory may take some pressure off of the U.S., which has historically been the key growth driver for the global economy.

Broadly speaking, February served up strong returns across asset classes. Equity markets were up 4.0% in the U.S., 2.8% in Europe, and 3.1% in Emerging Markets, as the post-U.S. election equity market surge continued¹. Fixed income posted positive returns as well, despite the increased probability of a rate hike in the U.S., with global fixed income markets up 0.5% and U.S. high yield returning 1.4%. This performance came with relatively low volatility, as evidenced by the VIX and MOVE indices, which measure stock and U.S. treasury volatility, respectively.

Despite low volatility, market dynamics appear supportive of hedge fund strategies. In addition to the potential for policy driven opportunities in specific sectors that we have discussed in previous months, we are also seeing some of the lowest levels of intra- and cross-asset correlation in years, which is generally supportive of stock-pickers and active management more broadly. Equity and FX correlation, in particular, have come down and are currently at the lower end of their long-term ranges. This may be a positive dynamic for hedge funds, as it provides more opportunity for managers that take a long/short approach, as well as for macro-based strategies that look to take advantage of divergent trends across interest rates, fixed income and currency markets.

Review of Fund Performance²

The investment objective of Blackstone Diversified Multi-Strategy Fund (the “Fund”) is to seek capital appreciation. The Fund aims to achieve its objective by managing assets directly (via BAIA³) or by allocating assets among a variety of investment sub-advisers, each with experience managing non-traditional or “alternative” investment strategies. In February, the Fund’s Class I share class returned 0.67%⁴ net of fees and expenses versus 2.82% and 0.47% for the MSCI World and Barclays Global Aggregate Bond indices, respectively.

1. S&P 500 represents Equity markets; MSCI Europe represents Europe; MSCI EM represents Emerging Markets. Source: Morgan Stanley, “Global In the Flow.”

2. The volatility of the indices presented may be materially different from that of the performance of the fund. In addition, the indices employ different investment guidelines and criteria than the Fund; as a result, the holdings in the Fund may differ significantly from the securities that comprise the indices. The performance of the indices has not been selected to represent an appropriate benchmark to compare to the performance of the Fund, but rather is disclosed to allow for comparison of the Fund’s performance to that of well-known and widely recognized indices. A summary of the investment guidelines for the indices presented are available upon request. In the case of equity indices, performance of the indices reflects the reinvestment of dividends.

3. Blackstone Alternative Investment Advisors (“BAIA”), the Fund’s investment advisor, manages a portion of the Fund’s assets directly. Such assets include allocations to a risk premia trading strategy and investment funds and may also include opportunistic trades. BAIA’s fees on directly managed assets are not reduced by a payment to a sub-advisor.

4. Performance is shown net of all fees and expenses for Share Class I (USD). Past performance may not be a reliable guide to future performance. The value of shares may go down as well as up and there can be no assurance that the Fund will achieve its investment objectives or avoid significant losses. Performance is estimated and unaudited.

Equity Strategies

Equity strategies continued their positive momentum in February, with most of the positive performance coming from positioning around U.S. policy and its implications. Long healthcare positions benefitted from a rally in the sector, and were further helped by a bias toward healthcare services relative to pharma, as the former look to benefit from potential repeal or reform of existing healthcare policy. Certain short financials exposures detracted from performance, as “risk-on” sentiment drove the stocks of financial services companies higher during the month. While we are likely to maintain our relatively low exposure to long/short equity managers in the near term, we are cautiously optimistic about the alpha environment for these strategies given the various regulatory and market dynamics we have previously discussed.

Credit Strategies

Credit strategies posted positive performance in February, with all sub-advisers contributing gains. Both corporate and structured credit exposures benefitted from positive carry and potential implications of proposed changes in interest deductibility. In addition to continued gains generated by exposures to credit risk transfer (CRT) bonds, the portfolio also benefitted from positive cash flow across commercial mortgage-backed securities (CMBS) and asset-backed securities (ABS). Collateralized loan obligation (CLO) tranches benefitted from increased probability of rising rates, which has been driving demand for floating rate credit instruments more broadly, and tightening residential mortgage-backed securities (RMBS) spreads and price appreciation in several corporate bonds in financials and entertainment sectors also boosted performance. We continue to monitor broader credit conditions across corporate high yield and structured credit markets, and we are watching policy coming out of the new U.S. administration closely with the aim of capitalizing on any dislocations that may result.

Multi-Asset Strategies

Multi-Asset strategies were the largest contributor to performance in February, with gains driven primarily by short exposure to lower carry funding currencies, such as the Swiss Franc, short exposure to the Euro, which suffered from political uncertainty, and long exposure to the Mexican Peso which reflected the rally in “risk on” sentiment during the month. European equity exposures generated positive returns, as the Fund’s sub-advisers were well positioned going into earnings season. Additionally, certain Argentine local and hard currency sovereign bonds performed well after their recent inclusion in J.P. Morgan’s widely followed GBI-EM index, and better than expected growth data for Q4 was released during the month. The developed currency portfolio detracted from performance, which stemmed primarily from repricing USD given expected tax reform impacts on exports/imports.

Opinions expressed reflect the current opinions of BAIA as of the date of this material only and should not be the basis of any investment decisions. Past performance is not necessarily indicative of future results. There can be no assurance that the Fund or its underlying managers will achieve their investment objectives or avoid significant losses. The Fund is actively managed and allocations are subject to ongoing revision. Certain of the information provided herein has been obtained from or derived from BAIA’s underlying managers. BAAM does not guarantee the accuracy or completeness of such information.

All investors should consider the investment objectives, risks, charges and expenses of Blackstone Diversified Multi-Strategy Fund (BXDMS) carefully before investing. The Key Investor Information Document (‘KIID’), Prospectus and Supplement contain this and other information about BXDMS and are available on the Blackstone website at www.blackstone.com/BXDMS. All KIIDs are available in English, and certain share class specific KIIDs are available in French, German, Dutch, Danish, Finnish, Swedish, Norwegian, Spanish and Italian as indicated on the Blackstone website. All investors are urged to carefully read the Prospectus, Supplement and KIID in their entirety before investing.

Glossary of Terms:

Beta: A measure of the volatility, or systemic risk, of a security or a portfolio in comparison to the market as a whole.

Standard Deviation: A measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. Standard deviation is calculated as the square root of variance.

Alpha: A risk-adjusted performance measure that represents the average return on a portfolio over and above that predicted by the capital asset pricing model (CAPM), given the portfolio’s beta and the average market return.

Sharpe Ratio: A ratio to measure risk-adjusted performance. The Sharpe Ratio is calculated by subtracting the risk-free rate – such as that of the 10-year U.S. Treasury bond – from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns. The greater a portfolio’s Sharpe Ratio, the better its risk-adjusted performance has been.

Delta: The ratio comparing the change in the price of the underlying asset to the corresponding change in the price of a derivative.

Gross Exposure: Reflects the aggregate of long and synthetic short investment positions in relation to the net asset value. For example, if BXDMS has 60% long exposure and 50% synthetic short exposure to a particular asset class, then BXDMS has 110% gross exposure to that asset class. The gross exposure is one indication of the level of leverage in a portfolio.

Net Exposure: This is the difference between long and synthetic short investment positions in relation to the net asset value. For example, if BXDMS has 60% long exposure and 50% synthetic short exposure to a particular asset class, then BXDMS is 10% net exposure to that asset class.

Long: A long position occurs when an individual owns securities.

Synthetic Short: Short selling an underlying security through the use of derivatives. Synthetic Short positions can generate returns when the price of the underlying security declines.

VaR: A statistical technique used to measure and quantify the level of financial risk within a firm or investment portfolio over a specific time frame. Value at risk is used by risk managers in order to measure and control the level of risk which the firm undertakes. The risk manager’s job is to ensure that risks are not taken beyond the level at which the firm can absorb the losses of a probable worst outcome.

Glossary of Indices:

Market indices obtained through Bloomberg. Indices are presented are indicative and for illustrative purposes only, are unmanaged and investors cannot invest in an index. The volatility of the indices presented may be materially different from that of the performance of BXDMS. In addition, the indices employ different investment guidelines and criteria than BXDMS; as a result, the holdings in BXDMS may differ significantly from the securities that comprise the indices. The performance of the indices has not been selected to represent an appropriate benchmark to compare to the performance of BXDMS, but rather is disclosed to allow for comparison of BXDMS performance to that of well-known and widely recognized indices. In the case of equity indices, performance of the indices reflects the reinvestment of dividends.

Barclays Global Aggregate Bond Index (JPY-Hedged): provides a broad-based measure of the global investment grade fixed-rate debt markets. It is comprised of the U.S. Aggregate, Pan- European Aggregate, and the Asian-Pacific Aggregate Indexes.

MSCI World Index (JPY-Hedged): A market capitalization weighted index designed to provide a broad measure of equity-market performance throughout the world. The MSCI World is maintained by Morgan Stanley Capital International, and is comprised of stocks from all the developed markets in the world.

Important Disclosure:

Blackstone has agreed to waive its fees and/or reimburse expenses of the Fund so that “Other Expenses” will not exceed 0.45% (annualized). For this purpose, “Other Expenses” includes all expenses incurred in the business of the Fund other than (i) establishment expenses relating to the Fund; (ii) investment management fees; (iii) Performance Fees or Additional Performance Fees; (iv) distributor fees; (v) Eligible Collective Investment Scheme fees and expenses, (vi) brokerage and trading costs, (vii) interest payments, (viii) taxes, and (ix) extraordinary expenses. Blackstone may terminate or modify this arrangement at any time in its sole discretion upon 30 days’ notice in writing to the Fund’s shareholders.

Important Risks:

There can be no assurance that BXDMS will achieve its investment objective. It should be appreciated that the value of Shares may go down as well as up. An investment in a Fund involves investment risks, including possible loss of the entire amount invested. The capital return and income of BXDMS is based on the capital appreciation and income on the investments it holds, less expenses incurred. Therefore, the Fund’s return may be expected to fluctuate in response to changes in such capital appreciation or income. The following is a summary description of certain principal risks of investing in BXDMS:

- General economic and market conditions can affect the price and volatility of investments.
- The success of the Fund depends upon BAIA’s skill in determining the Fund’s allocation to alternative investment strategies and in selecting the best mix of sub-advisers. There can be no guarantee that sub-advisers will stick to the Investment strategy for which they were selected, or that these strategies will be successful.
- Sub-advisers may make investment decisions which conflict with each other; for example, sub-advisers may hold economically offsetting positions or may purchase or sell the same security at the same time without aggregating their transactions. This may result in unnecessary brokerage and other expenses and the Fund may incur losses as a result.
- Some of the sub-advisers selected may hold only a small number of investments, or assets that move closely in line with assets held by other sub-advisers.
- The Fund’s investments will include shares, bonds and FDI. Each of these will be exposed to the risks specific to the type of asset in question. In particular, the use of FDI may result in substantial gains or losses that are greater in magnitude than the original amount invested.
- The Fund may invest in countries with a weak legal or financial framework where it can be hard to enforce ownership rights or repatriate funds.
- The Fund may invest in currencies other than its base currency. The success of measures to protect the Fund or a Class against currency movements cannot be certain.
- Changes in exchange rates may have an adverse effect on the value price or income of the product.
- The Fund may invest in FDI that derive their value from other assets in the expectation of making a profit if the price of the assets falls; theoretically, this could result in an infinite loss.
- The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Low trading volumes, lack of buyers, large positions or legal restrictions may limit or prevent the Fund from selling particular assets quickly and/or at desirable prices.

For further information on the risks faced by the Fund, see “Risk Factors” in the Prospectus and Supplement for the Fund, available from www.blackstone.com/BXDMS
